

LS series restricted profiles

While there are other inline restricted profiles in the market place, the LS Series remains one of the most comprehensive and competitive.

With the release of LSGP2, LSGP3 and LSGPM to compliment LSGP1, there is now a family of products available, allowing for more advanced master key systems.

Design registration provides protection until September 2019, and importantly there is a full range of restricted plugs available to suit just about every application.

The M profile is available in a key blank, not a broached barrel, as we have designed the new profiles in such a way to allow members to use GP1 as a maison plug. The following table illustrates this:

	GPM Key	GP1 Key	GP2 Key	GP3 Key
GP1 Barrel	X	X	X	X
GP2 Barrel	X		X	
GP3 Barrel	X			X

For members wanting to build a new multi broach system, then they should use LSGP2 and LSGP3, and use the LSGPM key for their master key or grand master key.

For members wanting a single profile system, then any of the three profiles can be selected.

If members wish to extend an existing GP1 system and include LSGP2 and LSGP3 barrels, then they need to be aware that the GP2 and GP3 keys will enter the existing GP1 barrel and allow for this when coding the system.

Support your association

The LSGP profiles are for the members of the MLAA only and by using any of the profiles within the family, members support the Association, who in turn support their members.
